Cedar Creek Company's Kill Floor Systems are used in some of the largest kill floors in Australia and have been operating in some abattoirs for over 20 years. Integrating imported data modules and processing-floor acquired data, provides the processor with a very detailed profile per carcass.

Full carcass traceability involves using the bodyTRACE system to scan and record each animal eID at the knocking box, correlate each eID with the body NLIS number and the correct PIC on the kill agenda and match each carcass with its hook containing a unique embedded RFID tag. This system enables kill floor data acquisitions, through input stations including - animal health assessment; dentition; live weight statistics; grading and VIAscan. Data input screens can be customised to the specific processing station and company needs.

All captured data integrates to other FoodChain modules such as inventory and carcass assessment feedback to the grower. The processing data replicates to the host system in real-time for immediate decision making by on-floor supervisors and production management staff.

FoodChain is Cedar Creek Company’s flagship integrated suite of software solutions, delivering transparency and traceability from carcass to carton.

The integrated systems represent the highest level of industry best-practice and are certified for regulatory and legislative requirements. The modular applications address the unique demands of the red meat, poultry and perishable food processing sectors.
