Livestock Procurement and Payment Module (eNVD)

Cedar Creek
COMPANY

Cedar Creek Company's Livestock Procurement, Booking and Payment Modules is eNVD compliant. It enables livestock bookings to be handled from point of purchase with vendors and sale yards, and tracked from receipt, to feedlot, to abattoir and through to final payment. All types of bookings are catered for including service kills.

Buyers can submit either pending or final bookings remotely and have access to price grids, quotations and forward contracts.

Aus-meat standard feedback reports are generated with weight and grading assessment standards. The individual carcass results and skin valuations can be used to finalise value and payment. Through our web feedback system, one data source is integrated with the payment system and means that benchmarking assessments and non-compliance costs can be determined in close to real-time.

CCC's livestock booking system can generate a diverse range of reports such as those to track buyer performance, including - lot analyses and producer comparisons and ranking; production details, summaries and averages; and variance to specification compliance.

Data analysed for general ledger reporting, can account for costs incurred from sale of living stock; service kills; animal location movement or count changes from dead in yard or on arrival.
