

FoodChain™

Export and Domestic Sales

Cedar Creek
COMPANY

Cedar Creek Company's Sales Solution Module - generates the documentation required for order costings, contracts, freight, insurance, export and shipping. The financial reporting of sales orders are linked to production and inventory.

These CCC modules can generate a diverse range of document types including invoices, full sets of export documents (meeting all market requirements), insurance forms and freight forwarding instructions. The user receives both draft and final versions of documents, so changes can be made if needed.

Pricing for products can be derived from a customer-based price list and can be changed at any stage prior to issuing the invoice. Various units of measure are catered for in all parts of the system (ordering volumes and currency). Export order documentation includes destination, freight, commissions and currency exchange rates (variable per customer).

Traders can quickly enter their sale details by making use of system defaults based on the customer and destination of the sale. The modules feature detailed sales and stock enquiry screens, allowing shipments to be handled with ease and production to be forecasted where necessary. Available stock quantities are displayed on-screen next to each product allowing the sales team to quickly see what can be sold.

Upon invoicing a sale, the transaction is stored for both customer and products and is accessible by the enquiry screens. Stock movements are completely traceable and can be followed in all parts of the system from production to loadout to even return of stock.

CCC's Sales module interface with the CCC Treasury System. It also interfaces to the most common external accounting systems and has text-based export files for other systems.
