

Manual Weigh and Label Stations

Features and specifications

These rugged systems require an operator to select the product being processed, which is then weighed, and a label is printed and applied manually.

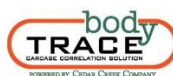

The MWLS stations can be used in three modes – item piece mode; carton mode, or; mixed mode. Mixed mode means the same station weighs and labels each individual piece into a carton then aggregates the piece data and produces a carton label.

Labelling functions include – predates, delete cartons, reprint labels, part cartons, part processing, manual weight, multiple on-screen enquiries.

Reporting functions include – production by batch and shift and product data sets per carton.

These systems are:

- ◆ **Reliable and robust** - some units have been in continuous use on a processing floor for more than 15 years. The load cell has a protective membrane and all stainless-steel enclosures are IP66 equivalent.
- ◆ **Accurate and intuitive** – trade approved, which means a quality precision weighing balance.
- ◆ **Fast** industrial printers with **high quality fine print** standards on the labels – vital for scanners needing to read detail in small barcodes.
- ◆ **Low maintenance** – They have minimal downtime, excellent print head life and easy access to change label rolls quickly.
- ◆ **Versatile** uses and positioning - it can weigh up to 60kgs and has a tidy footprint.

Australia PO Box 1405, Stafford QLD 4053 ▶ 8/87 Webster Rd, Stafford QLD 4053

These systems feature:

- ◆ Easy access for maintenance
- ◆ CCC's 19" HEC and Windows license
- ◆ A solid state drive
- ◆ LED (backlit) colour LCD display with ELO resistive touch-screen and protective decal
- ◆ Intermec industrial printers with stainless steel enclosure and the cabling, DYOL license and labeller mod kit.
- ◆ Stainless-steel, high resolution scale indicators
- ◆ Scale base with roller top, specifically design for food processing environments, max 60kg, 20 gram increments
- ◆ A full carton weigh stand fitted with cables and plugs
